

VIEW-MAX

SLIDING & DOUBLE HUNG WINDOWS

Maximum View - Unlimited Possibilities

The View-Max window offers unparalleled levels of flexibility by allowing designers, architects, builders or home owners the flexibility of 76mm or 100mm framing, whilst catering for those after the slimline approach or those after a more robust commercial design.

The View-Max window seamlessly adapts to ALSPEC's award winning commercial framing systems such as the McArthur or Hunter ranges allowing for the integration of fixed flush glazing, double-hung windows, awning windows or for the integration of ALSPEC's other renowned Hawkesbury or Commercial Sliding Door ranges.

View-Max integrates a number of design initiatives unique to ALSPEC such as the proprietary locking, roller and drainage systems. In line with the ever increasing environmental challenges facing architects and building designers, the View-Max window offers the flexibility of single and double glazing allowing for cost effective energy ratings through the use of double glazed sashes on those elevations where it is required and single glazing on those less energy sensitive elevations.

FEATURES	BENEFITS
Commercially designed with sliding & double-hung options to suit 76mm and 101mm	Complements and integrates with ALSPEC Commercial ranges
Developed specifically for multi-storey residential and architecturally designed housing	Allows greater flexibility in design and integration
Varied glazing options for up to 11mm monolithic glass & double glazed units	Superior thermal and acoustic performance (refer to test reports)
Incorporates a commercial draining system	Superior weather performance (refer AS2047 reports)
No tooling required, minimal processing	Cost effective and simple fabrication
